New Cresco™ Ornamental & Landscape Products Introduced

(Houston, TX – April 26, 2009) Cresco Concrete Products, LLC has introduced a new line of ornamental and landscape products. Included in the line are balustrades, pavers, trench drains, garden benches, parking stops, timber texture concrete beams, rope top edging, segmental blocks, and specially designed blocks for raised beds.

Manufactured using their proprietary aeration process, the balustrades weigh half as much as similar systems. This characteristic makes installation easier, reduces freight loads, and lowers support requirements. Balustrade components include pillars, rails, balls, bases, and caps.

The parking stops, timber look beams, and raised beds blocks are all made with a high percentage of recycled concrete as aggregate and are considered Green building products.

The Riven and Renaissance pavers allow for the creation of very unique and complex patterns. Applications include paths, patios, and plant surrounds.
